FACTFUL APRIL

Curiosities of the Month

- The famous “April Fools’ Day” may have started when countries switched to the Gregorian calendar—people who still celebrated New Year in April were mocked as “fools.”
- In Japan, April marks the start of the school and financial year, unlike most countries where it begins in January 📅
- No other month of the year always starts on the same weekday as April (a unique calendar quirk!)
- April is the only month whose name has no exact match in Greek mythology—most other months are linked directly to Roman or Greek gods
- The Lyrid meteor shower, one of the oldest recorded meteor showers (observed for over 2,600 years), peaks in April 🌠
- If you’re born in April, your zodiac sign is either Aries or Taurus, and statistically, April-born people are often linked with leadership traits
- The Titanic sank on 15 April 1912, one of the most famous maritime disasters in history 🚢
- April sometimes has four full weeks exactly (4 Mondays, 4 Tuesdays, etc.), which doesn’t happen every month
